EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Adam Cermak, reg. no. 40,391 on 2/14/05.

3 The application has been amended as follows:

In the Applicant's response filed 01/26/05:

A. Amend Claims 1 and 7:

1. (Currently Amended) A method for detecting partial conductor short circuits between a first end and a second end of a first conductor, the first conductor including plural mutually insulated partial conductors which extend substantially in parallel between said first and second ends and which are short-circuited at said first end, said second end, or both, the method comprising:

arranging an auxiliary conductor in parallel with said first conductor at a distance, thereby creating a first combined conductor;

feeding a time-varying electrical signal into an end of said first combined conductor;
measuring the propagation behavior of said time-varying electrical signal on said first combined conductor;

comparing the measured propagation behavior with a known propagation behavior of a second combined conductor comprising a second conductor as a reference conductor, said

second conductor being similar to said first conductor but without partial conductor short circuits; and

determining the presence of partial conductor short circuits within said first conductor from the changes in propagation behavior from said comparing.

7. (Currently Amended) A device useful for detecting partial conductor short circuits, comprising:

a retaining device;

a conductor comprising ends and a plurality of mutually insulated partial conductors being short-circuited at least at one end of said conductor and extending substantially in parallel, and an auxiliary conductor, arranged in parallel and at a fixed distance to each other in the retaining device;

a signal source;

a measuring device;

an input lead; and

a return lead;

wherein the conductor is connected at one end via the input lead to the signal source; and

wherein the auxiliary conductor is connected via the return lead to the measuring device.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Walter Benson whose telephone number is (571) 272-2227. The examiner can normally be reached on Mon to Fri 6:30 AM to 4:00 PM.
